

NovaStor DataCenter Standard Upgrade Process

Please follow the steps specified below to upgrade your current NovaStor DataCenter Standard version to a later version. Use the following download links to perform your upgrade. The links are generic and will always provide you with the latest version available.

Windows Installer

http://filestore.novastor.com/Downloads/NovaBACKUP-DC/Current/NBK_DC_Windows.zip

Linux Installer

http://filestore.novastor.com/Downloads/NovaBACKUP-DC/Current/NBK_DC_Linux.zip

Upgrade Instruction

1. Download the Commandserver installer for the respective OS and the SW-Depot ZIP file. Download links above.
2. Start the Commandserver installer and choose the install directory of the existing NovaBACKUP DataCenter installation, perform the install. During install, the SW-depot ZIP file will be extracted.
3. After install, open the GUI.
4. Navigate to System->NodesManagement. To update the client version, mark all nodes and use function "Update Node(s)..." Update to the latest version.
5. To update the DB information, mark all nodes and use function "Sync node info". Click OK on each upcoming check box.
